

Package Notes 2014-2015

Stuff included here is good for playing as it is configured here without to be separated in other way.

As long as they are still in development you might find them often updated, so any work here might be outdated at a moment.

Mismatch - NOT EXIST as long as this stuff is not part of UT'99 and you shouldn't un-cache content as long as source-codes are here to be used.

If any of you want to build a server with such stuff feel free to rename classes and create a permanent package more or less official recognized as a good work.
